

Speakers Bureau For Your Next Company-wide Meeting and/or Professional Conference

There are a number of issues in the environmental, health, and safety areas that concern us all. And, whether you gather as a company, as an industry sponsored association, a group of concerned colleagues, or as a department, topics arise that need further clarification or someone to provide a fresh perspective on. Phylmar has assembled some of our top client advisors and asked them to provide the following list of presentations they feel comfortable sharing with others in the industry. We can also put together new presentations, if needed, on topics including current legislation, indoor air quality, and environmental management, among others. Please call us directly at (310) 474-3937 for a schedule of rates and availability to present at your next event.

Alternative Metrics

In response to those looking for ways to measure the effectiveness of safety and health programs using something other than OSHA recordable injuries and lost time, a Task Force has been established and is working to develop a Metrics Guide of candidate measures. A pilot study and employee perception survey is planned to be pilot-tested in 2003. This presentation sets forth the work of the Task Force to date.

Criminal Prosecution for Safety and Health Violations in California

California has some of the most comprehensive provisions for criminal

certain situations to the employer whose employees were exposed to a hazard, the employer who created the hazard (whether or not its employees were exposed), the employer who controls the safety and health conditions at the worksite, and the employer who is responsible for correcting safety and health hazards at a workplace. This presentation explains these various categories of employers, the regulation, and provides tips on how to avoid liability.

Federal OSHA's Policy on Voluntary Audits

Federal OSHA issued a notice clarifying the definition of a voluntary self-audit and describes how Federal OSHA will treat them during civil enforcement activities. This presentation reviews the definitions and the implications of the policy.

employees, community members and the media. You will gain an understanding of how risk is perceived and learn the best approaches to communicate risk. Case studies and real world examples, including those dealing with chemical and biological threats, are incorporated into the talk to help you better understand effective risk communication.

Making the Business Case: A Systematic Approach to EH&S Investment

How do you get E&HS professionals and management to engage in a "common language," objective discussion regarding corporate investment and risk mitigation? In this talk we describe an effective method to present the business case for EH&S related projects using the Return on Environmental Health and Safety Investment (ROEHSI) tool. Using the ROEHSI model enables EH&S professionals to credibly, objectively and comprehensively analyze and recommend EH&S projects to management in a language they can understand, support, defend and, most importantly, fund. This approach allows mainstreaming of the EHS function into the overall business of the organization.

The Real Facts About Mold

This presentation addresses the reason mold has become such a hot news item. The most current scientific information is presented along with

in California
